

# Important Information About Your Drinking Water

## Town of Lake Placid Drinking Water Plants

### **SITUATION**

The Town of Lake Placid public drinking water system failed to perform compliance monitoring for Nitrate and Nitrite Samples.

### **HEALTH EFFECTS**

*We are required to monitor your drinking water for specific contaminants on a regular basis. Results of regular monitoring are an indicator of whether or not your drinking water meets health standards. During the calendar year 2023, we did not perform monitoring for Nitrate and Nitrite, and therefore cannot be sure of the quality of your drinking water (with respect to these contaminants) during that time.*

### **WHAT SHOULD CUSTOMERS DO?**

Although this water system did not perform monitoring for Nitrate and Nitrite during the calendar year of 2023, the water system did collect samples for Nitrate and Nitrite at Magnolia, Sirena, Tomoka, and Highway Water Plants on the February 28, 2024.

Since the laboratory results of the samples collected on February 28, 2024, indicated the Nitrate and Nitrite concentrations were in compliance with their Maximum Contaminant Levels, at this time, **customers need not take any action or seek an alternate water supply.**

### **WHAT IS BEING DONE ?**

As soon as the water system realized monitoring for Nitrate and Nitrite had not been performed during the calendar year of 2023, they collected samples for these contaminants on February 28, 2024.

### **ADDITIONAL INFORMATION**

For more information please contact Leigh Anne Bemis at 863-699-3747

Or you may contact Department of Environmental Protection at (239) 344-5615.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly. You can do this by posting this notice in a public place or distributing copies by hand or mail.
